

MISSION FIRST: STRATEGIES FOR THE INCLUSION OF MISSION-BASED DECISION MAKING IN RESILIENCY PLANNING

Last Modified on 02/24/2020 12:48 pm EST

DoDI 4170.11 requires resilience planning by installations be aligned to critical mission operations. This session addresses lessons learned, methodologies, and approaches for improving an installation's readiness and resiliency posture. It will provide innovations for addressing important questions concerning mission operator coordination, the identification and review of mission dependencies, the evaluation of mission impacts, the assessment of mission risk and requirements, and the development and prioritization of resulting infrastructure solutions allowing for a comprehensive, strategic framework for resilient designs within the fence line and its impact on neighboring communities.
