

CYBER SECURITY INFRASTRUCTURE: PROTECTING CRITICAL ASSETS AND MISSION READINESS

Last Modified on 11/05/2021 1:40 pm EDT

This session will present a real-life network, specifically designed to provide assured operation of critical operational technologies and infrastructure during a cyber attack. The network is a platform for solving complex cyber problems like zero-trust, real-time detection of anomalies, and mitigating cyber attack vectors presented by convergence of traditional IT and OT. Additionally, the system implements required Risk Management Framework and integrates with the U.S. Air Force Civil Engineer Center's Community of Interest Network Enclave.
