

FLEETS, FACILITIES, AND FUELS: FIELDING NON-TACTICAL ELECTRIC VEHICLES ON MILITARY INSTALLATIONS

Last Modified on 11/02/2022 12:36 pm EDT

As governments, industry, capital providers and other key stakeholders engage in the mobility transition beyond petroleum, impacts to infrastructure and operations are imminent. Integrated strategic planning will play a vital role in creating a more resilient infrastructure network in support of military operations. Promoting energy independence and resilience across fleets, facilities, and fuels without impeding an agency's primary mission is paramount. This panel will examine key strategic planning and implementation factors for fielding non-tactical zero emission vehicles (ZEV) on military installations today and the near future as the defense community engages in the transition.
